## **Beta-beating @ injection measured by analysis of turn-by-turn betatron oscillation data during commissioning:**

- 15 March, Fill 2364.
- Oscillations induced with Tune-kicker (NOT the AC-Dipole).
- Local ( $f_{1010}$  &  $f_{1001}$ ) and global ( $\frac{\Delta\beta}{\beta}$  &  $\frac{\Delta D_x}{\sqrt{\beta_x}}$ ) corrections applied.

## **Beta-beating @ injection in IR4 quadrupoles measured by K-modulation during MD block 1:**

- 12 April (?), BI MD.
- B1: MQY.5R4.B1, MQY.6R4.B1, MQM.7R4.B1.
- B2: MQY.5R4.B2, MQY.5L4.B2, MQY.6L4.B2.
- Details from presentation: LSWG 15-May-2012,  
*'2012 MD#1 BI RESULTS (preliminary)',*  
F.Roncarolo on behalf of BI team.

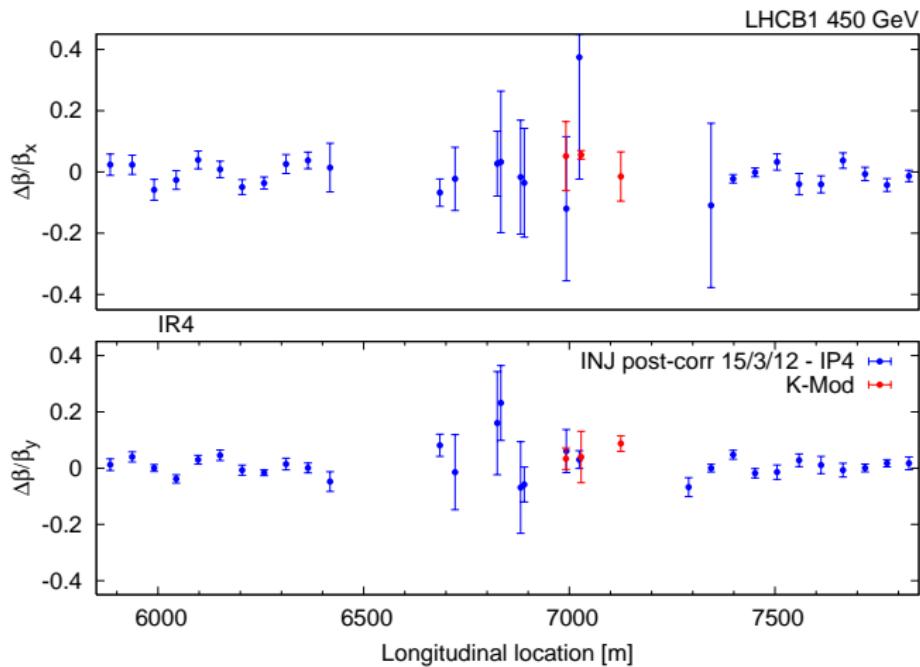

**Next slides compare measured post-correction beta-beat around IP4 from TbT (@ bpms) and K-mod (@ quads).**
